

# The more you shop around ... the better Bay State wheels stack up

Figure performance in relation to price and you get true value. Compare Bay State wheels on this basis and you find Bay State comes out ahead in every weld-grinding category. Name the job and we've got a wheel for it. Bay State pioneered the reinforced, raised-hub disc wheel and today there is no line that can match it for completeness, durability, and true economy. Take a look at this line-up:

**KOOLIE HAT®** Triple layer reinforcement and special shape give extra durability and controlled contact area.

**FAT HATS** Outcut and outlast even competitive cup wheels on heavy work.

**SAF-T-CUT** Extra tough, stands up against jagged, thin or hard metal edges.

**BAYFLEX®** Smooth, controlled cutting action where smooth finish is important.

**DURACUT®** Waffle pattern permits blending or finishing flat or curved metal surfaces.

**BLUE FLASH®** New bonding process gives fastest economical stock removal in grinding welds on all metals.

**READYMOUNT** Mounts directly on shaft, speeds wheel changes. Disposable with used wheel.

Proof of the superior performance of these wheels is easy to come by. Just call in your Bay State distributor or direct representative ... let him specify and demonstrate the exact wheels you need for your operations ... a wide variety available for immediate shipment. *Better grinding at lower cost ... that is our business.*
